23. Problem: (use additional Sheets if necessary) Updates are needed to the SGI FLEXlm License server host baseline information at LARC/EDC. Some impacts have occurred or will occur because of hardware movement. The attached red-lined updates will identify the 3 SGI FLEXlm servers at LARC, EDC that have been impacted or will be impacted by HW moves.						
24. Proposed Solution: (use additional sheets if necessary) At EDC, e0aag02, e0spg05 and e0wkg01 will be the 3 SGI FLEXlm redundant license servers after IRIX 6.5 transition upgrade (Release 55). LARC has currently baselined l0drg01 and l0drg03 as SGI FLEXlm license servers. l0acg01 is added as the third SGI FLEXlm license server, so that 3 SGI FLEXlm license servers will be available to configure in the baselined redundant server license configuration. Red-lines for the appropriate baseline documents are attached, including a new VATC and NSIDC version of 920-TDx-003.						
25. Alternate Solution: (use additional sheets if necessary) Identify alternative SGI FLEXlm servers.						
26. Consequences if Change(s) are not approved: (use additional sheets if necessary) Inability to configure 3 SGI FLEXlm servers in the baselined redundant mode configuration for SGI license access failover.						
27. Justification for Emergency (If Block 15 is "Emergency"):
